

Two Ecommerce Patent Families for Sale

These two families of patents originally from Boku and Vidicom are both for sale.

The first one outlines systems and methods are provided to facilitate online transactions via mobile communications. The second family provides systems and methods to facilitate repeated purchase and payment transactions. E.g. a system that includes an interchange and a data storage facility configured to store payment transaction records associated with phone numbers.

Please see list of patents below:

US8548426: Systems and methods to approve electronic payments
